

CTA FIRE LTD

FIRE ALARM SYSTEMS

HIGH DEFINITION CCTV

ACCESS CONTROL SYSTEMS

EMERGENCY LIGHTING

FIRE EXTINGUISHERS

Who are CTA Fire?

Established since 1985 and serving London and the south east we have quietly provided a range of fire safety services and solutions from consulting to service and maintenance of various alarm warning systems to contractors and end users.

Our core business is the design, installation and ongoing service and maintenance of all types of fire alarm systems from the very latest wireless detection systems, through to computer room extinguishing systems to aspirating and analogue addressable and non addressable fire alarm systems.

More recently our operations have expanded toward Access Control, HD CCTV, Fire Extinguishers and Emergency Lighting and Fire Telephone and Water Leak Detection.

CTA is an independent family run and fully accredited NSI BAFE SP203 pt 1 Third Party Certificated Company. We love what we do. Every job is personal and working with you rather than “at you” and delivering what you want is our ultimate end goal.

Why choose CTA Fire?

We are passionate about fire alarm systems and everything else we do. We try to be as straight forward as we can, speaking in plain English and not trying to baffle you with science. We will design your system and try and put all the information in front of you and help you make an informed decision.

Many of our clients have been with us in excess of 10 years, some for 30 years.

We are not highly contractual, we have old fashioned values and still believe in handshakes, trust and understanding.

Together we can help minimise false alarms, minimise faults, minimise call out charges and hopefully reduce your stress levels!

We can completely manage your fire safety obligations under the Fire Safety Order 2005 from Risk Assessments to Staff Training.

Our goal is to build a mutually beneficial long term relationship. We can't do that by over specifying and over charging for things you don't need.

CTA are specialists in wireless fire detection having designed and installed hundreds of systems over the last 20 years for more than thirty London West End Theatres including Theatre Royal Drury Lane and Theatre Royal Haymarket.

We also work with premiere organisations such as The Foreign Office and MSecure (part of the Mace Group) designing Fire Detection and Access Control Systems in various British Embassies around the world and Amey PLC. We are proud to have amongst our client base The Law Society, Royal Horticultural Society, SAGA, Hitachi Rail (Ashford), the SERCO offices (Bracknell) and the Kentec fire alarm manufacturing facilities in Dartford.

As well as looking after offices, schools, care homes, waste management facilities, shopping malls, windmills and museums.

How can we **help you?**

Installation and service of all types of fire alarm systems.

Fully certificated systems

meeting **BS 5839 and BAFE SP203 pt 1** requirements. Quality Open Protocol systems offering you ultimate control, reliability and flexibility. Whether you need a basic fire detection system, wireless, Voice Alarm, aspirating (VESDA) or gas suppression system (typically computer rooms).

Emergency lighting and signage to meet BS 5266

requirements. FIREscape is

the latest in green energy efficient LED technology. It uses less than 5% of the energy consumption compared with conventional lighting and incorporates self monitoring programmable systems to requiring little or no maintenance.

CCTV technology has exploded in recent years. We offer complete new 1000 TVL

analogue systems through to state of the art HD quality IP systems depending on your needs. If you're tight on budget we can even upgrade your old coax based cameras to megapixel quality to improve images beyond your imagination.

From design to handover we will work with you to meet all British Standards, DDA /

Equality Act and Building Regulations (Part M) requirements to ensure you meet all your obligations under the **Fire Safety Order**. All new fire detection systems are **guaranteed for three years** when serviced by us. We will assist with risk assessments and keep you advised of changes in legislation affecting you.

Fire extinguishers are crucial to front line fire

fighting. Proper staff training

is a legal requirement and regular servicing is key to preventing serious damage or potentially destroying your business. Kite marked extinguishers and servicing to BS 5306 ensures that should the worst ever happen you will be prepared.

Door Access systems are a vital tool to monitor entry and exit not just into a building but

sensitive areas or rooms. You control who has access and when. Create automatic logs of "who's in" in the event of fire. High security Scramble Pads and air lock doors (interlocked so only one door can be open at a time) can be supplied.

For more information about all the products and services we offer please visit our website or to arrange a **free consultation** to discuss your fire safety and security issues then call us now:
